

## RESOURCES

# Point to point

Deliberant AP and CPE supports access point and station operating modes, therefore point-to-point can be created from AP and CPE or from 2 CPE's or from 2 AP's. For simplicity two CPE can be used because they have an integrated directional antennas. There are available options for SISO and MIMO PTPs. Maximum achievable real data throughput is up to 160 Mbps.

### Light Point to Point
