

### Wireless On the Move™

Extricom is a designer and manufacturer of high-performance wireless LAN (WLAN) infrastructure for the enterprise, enabling the converged triple play of data, streaming video, and voice over WLAN (VoWLAN).

While businesses increasingly seek to “cut the cord” for voice, data, and video communications, they also realize that increased reliance on WLAN raises the stakes. This recognition forces a re-examination of long-held assumptions about WLAN benchmarks of performance, deployment, and utility. It soon becomes clear that, to make pervasive WLAN possible, performance and resiliency of the network needs to increase, while at the same time the complexity, cost, and risk of deployment and maintenance must be reduced.

The answer is Extricom’s award-winning Interference-Free™ Wireless LAN architecture, a breakthrough technology that has been recognized as the next generation of enterprise Wi-Fi. The solution enables the enterprise to build a high-performance, large-scale WLAN infrastructure that is as dependable as the wired network, and supports triple play services without trade-offs between capacity, coverage, seamless mobility, and security. What’s more, deployment and maintenance of the Extricom WLAN System is dramatically simpler than the current generation of WLAN solutions in the marketplace.

Our customers include universities, healthcare / medical campuses, municipalities, primary and secondary school boards, and hospitality concerns. Whether it is for increased capacity, support for mobile voice, or the ability to effectively serve diverse groups of users, each has discovered the radical leap in ease of ownership and uncompromising performance that are the trademark of Extricom’s patent-pending innovation.

Extricom reaches all customers via a select group of distributors, value-added resellers, and integrators. Backing our partners is a multidisciplinary research group with deep expertise in voice over wireless, spread-spectrum radio, and embedded systems, led by management with proven success in development, manufacturing, and marketing of leading-edge communication solutions.

Founded in June 2002, Extricom operates from principal offices in New York, Tel Aviv, London and Tokyo. The company is privately held, with strategic investors that include Motorola Inc.

Meeting the need for converged Enterprise voice, video, and data services on large-scale Wireless LAN infrastructure.

Building long-term value for our customers, partners, and investors.
