2N and Grandstream Enhance Premise Security with Integrated Door Entry Intercoms and IP Video Telephony

Interoperability Boosts Security Protection of Business Premises with Live Video of People and Facilities

Brookline, MA, USA and Prague, Czech Republic (June 6, 2012) - Grandstream Networks, the leading US manufacturer of IP voice/video telephony and IP video surveillance solutions, and 2N Telekomunikace, a leading European manufacturer of telecommunication solutions for enterprises and operators worldwide, today announced the interoperability of IP Video Telephony Solutions from Grandstream with 2N's Helios IP line of Door and Security Intercoms. Integrating 2N Intercom solutions with Grandstream's GXV3140 and GXV3175 IP Multimedia Phones gives business customers flexible, cost-effective 24-7 premise security by streaming live intercom camera video feeds of people and/or vehicles requesting access to a retail facility, home, warehouses, office/apartment building, garage, etc. to a Grandstream IP multimedia phone. This IP application extends monitoring and access control capabilities beyond a single dedicated security office or receptionist to one or multiple people located anywhere within the facility or remotely over the Internet to anyone who has a Grandstream GXV31xx IP desktop multimedia phone. In addition to real-time video feeds, the GXV31xx phones provide two-way calling functionality between devices. "We are proud to be associated with Grandstream, a leading manufacturer of IP voice/video telephony as well as IP Surveillance," said Michael Vostatek, Head of the Intercom Group at 2N. "Offering Grandstream IP video telephony endpoints will take our solutions offering to the next level, thus presenting a great opportunity for our distribution partners in various vertical markets including Security, Home & Building Automation, or ICT."

2N's Helios IP line of door entry and intercom systems provide a wide range of applications for businesses including public/government entities, transportation, leisure, education, retail, residential, etc. Equipped with modern stainless steel, a flat design and a host of useful features for audio broadcasting, intercom, paging, video surveillance and audio surveillance, the Helios IP product family includes the Helios, Helios IP Vario, Helios IP Force, Helios IP Safety, and Helios IP Uni. All systems provide security for property and entrances and can be connected to existing phone, attendant, security and home automation systems. System modularity enables users to create customized solutions based on size, control elements and functions.

Grandstream's GXV31xx IP Multimedia Phones combine voice, video and multimedia functionality into a single desktop device. Everything required for an advanced, integrated multimedia communication experience is included in the phone such as high quality real-time video conferencing with HD audio, social media and business productivity applications, streaming online rich media content, built-in web browser, etc. The GXV3175 model features a sleek tablet-like design with a 7" touch screen color LCD and built-in Wi-Fi, while the Skype-certified GXV3140 model features a 4.3" digital TFT color LCD. Both the GXV3175 and GXV3140 include a tiltable 1.3 megapixel CMOS camera, allowing for live streaming of H.264/H.263/H.263+ video to and from 2N's Helios IP Door Intercom devices.

“The proliferation of SIP-based solutions opens a huge door for businesses of all sizes to adopt new business productivity and security solutions,” said David Li, CEO of Grandstream Networks. “The integration of Grandstream’s SIP video telephony endpoints with 2N’s SIP based door intercom reveals the extreme flexibility and power of such SIP based solutions that a business can benefit from. With surging demand for innovative and cost-effective security solutions, we look forward to offering more products that leverage the convergence benefits of IP communications and video security monitoring.”
