

## Wireless Installer tool released

Our new APP is now available for Android and it's Free!

---

LigoWave presents our Wireless Installer Tool; an application created to simplify the link installation process. The APP can be used for the installation of Deliberant and LigoWave products.

It allows the installer to:

- Import the link coordinates using WNMS, LinkCalc, Google Earth or manually enter them
- Find the relative direction of the remote site while working at the local site
- Align the local radio to the remote radio using the augmented reality software and the Android's camera
- Wireless link signal levels are represented as audible tones generated by the handheld device
- Measure link performance throughput and PPS, while testing with different packet sizes
