

## Streakwave Promotional MetaGeek Bundles

Wi-Fi has revolutionized the way we work. People can get online from any location, stay connected via mobile devices, and eliminate cables and wires. It's magical and it's awesome.

- Find and see interference
- Know where to put AP's for best performance
- See and record where issues arise
- Analyze with simplicity
- Measure and identify networks
- Deploy accurately and easily

When Wi-Fi isn't working, it's a frustrating mystery. Users start complaining of dropped or slow signals and dead zones. Important data isn't being transferred. People can't get their tasks done. The workplace grinds to a halt. Wi-Fi is so awesome - it's also invisible - this is why it's so hard to fix without MetaGeek.

Wi-Spy and Chanalyzer were created to help you fix these Wi-Fi headaches . . . FAST! Choose the bundle that best serves your deployment.

### See the invisible with Wi-Spy

If you can see it, you can fix it.

Wi-Spy is a custom USB spectrum analyzer designed specifically for troubleshooting Wi-Fi issues. Unlike most Wi-Fi tools, Wi-Spy is able to measure ALL R.F. signals, not just Wi-Fi traffic. With Wi-Spy DBx, you can choose tools to measure R.F. signals in the 5 GHz band and the 2.4 GHz band!

By integrating the raw R.F. signal measurements from Wi-Spy with standard information from your Wi-Fi radio, Chanalyzer creates a complete picture of how Wi-Fi and non-Wi-Fi transmitters impact your wireless networks, giving you the information you need to resolve the issues affecting your users.

- Quickly locate interference
- Choose the best channel
- Troubleshoot Spectrum Remotely
- Document your results
